

Discontinuity of the STABURAGS N12MF grease.

To whom it concern,

Due to the discontinuity of the STABURAGS N 12 MF product in December 2018, WEG together with Klüber Lubrication recommend the replacement of this product for PETAMO GHY 133 N.

PETAMO GHY 133 N was approved after physical-chemical tests and tests on WEG electric motors test bay, with proven performance. Likewise, we confirm the miscibility between both products.

Thus, no negative influence or change in the lubrication interval is expected with the replacement for PETAMO GHY 133 N.

The grease changeover must be perform following the maintenance manual instructions.
