## **Typical Application:**

spring wire, fibre wire, general product, highest drawing speed with or without pressure dies, for medium and high carbon wire up to 3 passes, possibly in combination with Sodium/Calcium soaps. For carbon wire up to 5 passes, good clean surface after treatment, also inline coppering possible. for PC-wire after first 3 drafts as a combination lubricant,

## Remarks:

Good adherent surface film on the wire surface. Uniformly coated surface with good adherence of the lubricant. Good cleanability also with an inline process. High coating of the wire surface. Best performance in combination with pressure dies.

The data in this document is based on our general experience and knowledge at the time of publication and is intended to give information of possible applications to a reader with technical experience. It constitutes neither an assurance of product properties nor does it release the user from the obligation of performing preliminary field tests with the product selected for a specific application. All data are guide values which depend on the lubricant's composition, the intended use and the application method. The technical values of lubricants change depending on the mechanical, dynamical, chemical and thermal loads, time and pressure.

These changes may affect the function of a component. We recommend contacting us to discuss your specific application. If possible we will be pleased to provide a sample for testing on request. Traxit products are continually improved.
